

Smallest 2.5 mm Duplex connector in the jacket of RJ45

EUROMICRON GmbH introduces the EM-RJ – the world's smallest Duplex connector with 2.5 mm ferrules. With its RJ45-compatible connector face, the EM-RJ doubles the packing density in a network module. (four channels in a SC footprint).

EM-RJ is designed for multimode, singlemode and APC applications. In harsh industrial environments the housings of the existing copper elements can be used. A special POF-connector has been designed, allowing easy field termination. EUROMICRON completes its programme with wall outlets, transceivers and further components.
